Dear Hiring Manager,

I am writing to express my interest in **QA Manager, Senior QA Manager, Quality Engineering Leader, Test Architect, or Automation Architect** opportunities within your organization.

With **16+ years of IT experience**, I bring strong expertise in Quality Engineering, QA leadership, test automation, quality governance, and enterprise delivery. I have worked across **Government Identity, BFSI, Insurance, Travel Technology, and Life Sciences**, combining technical depth with people leadership and end-to-end quality ownership.

In my most recent role as **QA Associate Manager at Technoforte Software**, I led Quality Engineering for the **Uganda National Identity & Civil Registry Platform**, covering National ID, Birth Registration, Death Registration, and Civil Registry. I managed **11 direct QA professionals** and coordinated **30+ cross-functional team members** across QA, Development, DevOps, Business Analysis, and UAT.

My responsibilities included **QA strategy, SIT/UAT, quality gates, risk-based testing, release governance, production readiness, and Go/No-Go recommendations**. I also partnered closely with business and technology stakeholders to identify delivery risks, manage dependencies, and ensure successful releases.

From a technical perspective, I bring hands-on experience with **Java, Selenium, REST Assured, Playwright, Python, API testing, JMeter, Jenkins, Maven, Git, Docker, SQL, and CI/CD**. I have designed and guided UI, API, and performance automation frameworks and am increasingly focused on **AI-enabled Quality Engineering, Generative AI, LLM/RAG, prompt engineering, and AI-assisted test automation**.

My earlier engagements include **Wells Fargo, Allstate, LexisNexis, Great American Insurance Group, and Sabre**, along with **four years of USA onsite experience**. These assignments strengthened my experience in stakeholder management, enterprise testing, data validation, delivery governance, and collaboration across onsite/offshore teams.

I am looking for an opportunity where I can combine **QA leadership, modern test architecture, automation, AI, and delivery governance** to improve engineering effectiveness, product quality, and release confidence.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience can contribute to your organization's quality and engineering objectives.

Sincerely,

Neeharika Garg (Neeha)

QA Manager | Quality Engineering Leader | Automation & AI
